NEON/AOP
packaged reflectance
Native drone
MicaSense bands
Actual Landsat
independent comparison
Topography → BRDF → optional offset
Scene fits, geometry, masks; optional NDVI bins
QA + DN scaling
Footprint means
Empirical calibration
Synthetic OLI /
MicaSense response
Drone → Landsat-like
Fixed affine map
Pixel extraction → hierarchical medians
Gap-aware common representation / library
Representative
Python paths checked
(not every execution)
FCLS / MESMA
Reconstruct spectra
Ridge + projection
Predict fractions
Numerical checks
Proved algebra
Empirical / fitted
Conditional model
